mobility and more

HENRY® is a reverse walker that activates the child during training with walking and standing exercises. The shape of HENRY® encourages an active straightening of the body when walking and standing thus offering a concept that encourages a natural walking performance - as opposed to the more traditional walkers. Due to its extraordinary stability the child learns walking, standing and balancing in a considerably easier way using the HENRY®. The HENRY® walker is available in three sizes all including standard features like swivel front casters and swivel locks. HENRY® has a brand-new, extremely sturdy and effective non-reverse brake acting on the rear wheels. The non-reverse brakes reliably prevent HENRY® from rolling backwards, and furthermore they can be disengaged. Since the wheels roll very easily it can be of some advantage - especially in the first phase of learning - to fit the HENRY® walker with drag brakes. In addition, to make HENRY® even more usable, a range of accessories are available. HENRY® is extremely stable and safe, thereby giving the user and surroundings a feeling of confidence and security. HENRY® is manufactured from strong materials that ensure longevity, maximum reliability and minimum maintenance, and HENRY® is therefore suitable for both indoors and outdoors use.

Accessories

- Basket.
- Anti-tip supports (set).
- Drag brakes (set).
- Hip pads (set).
- Height adjustable seat.

Basket is available as an accessory.

Anti-tip supports and drag brakes are available as accessories.

When not in use, the seat is easily pushed away.

A height adjustable seat and hip pads are available as accessories.
